# Adam Ho

408-203-9917 | adamho129@gmail.com | Portfolio | LinkedIn | GitHub

## Summary

2+ YOE in Data Analysis and Software QA Automation, across SaaS startup quality operations and consumer tech research (Apple, Google). Skilled in **experiment design and analysis**, **KPI and dashboard development**, **SQL**, and in turning findings into clear recommendations for product and engineering stakeholders.

## Skills

**Product Analytics**: A/B Testing & Experiment Design • Power Analysis • Funnel & Retention Analysis • KPI & Metric Definition • Event Tracking & Implementation • Root-Cause Analysis • Dashboards & Self-Serve Reporting • Stakeholder Communication
**Technical**: SQL • BigQuery • Python (pandas, NumPy, SciPy, statsmodels, scikit-learn...) • Databricks • TypeScript/JavaScript • R • Mixpanel • GA4 • PostHog • Looker • Tableau • Power BI • Excel • Git • REST API • GraphQL • Postman • Airflow • Docker

## Experience

**QA Wolf** Oct 2025 – Oct 2026
***Software QA Engineer*** *Remote*

- Drove **requirements gathering** and translated **acceptance criteria** into structured test plans for product and engineering stakeholders; **built 400+ Playwright/TypeScript tests**, scaling coverage to **2,500+ tests per deploy**.
- **Triaged and root-caused 100s of test failures daily** from CI/CD runs and user-reported tickets across ∼10 concurrent enterprise-scale SaaS clients, working a **prioritized queue under strict SLAs** for suite investigation times.
- Acted as primary liaison between client stakeholders and engineers in scoping sessions to **prioritize test coverage** and reduce **flake** (false-positive) rates; delivered recommendations that gave clients **deploy confidence in product/feature changes.**
- Onboarded an NLP startup, defining **business requirements** and building a CI/CD pipeline of 100+ tests, including **automated regression** checks for ticketed issues, that eliminated its need for manual QA; leveraged **Agentic ML workflows** and custom MCP integrations to accelerate triage, debugging, and test authoring.
- Managed bug reports with documented repro steps, Loom recordings, and console logs in **Jira** and **Linear**; cross-referenced findings against clients' own internal tickets to catch duplicate and misdiagnosed issues.

**Apple (Akkodis)** Apr 2025 – Oct 2025
***User Research Analyst*** *Sunnyvale, CA*

- Performed **hypothesis testing** to compare UI design and hardware variations in a ∼900 participant VR study series, using **NumPy/pandas** for non-parametric hypothesis testing and EDA.
- Defined and reported **KPIs** across 8 concurrent user studies, consolidating metrics from individual trackers into an **automated Tableau dashboard** for weekly cross-functional business reviews.
- Designed **study protocols**, participant **eligibility logic**, and subjective measurement scales, aligning research design with **UX Research** and **Product** goals; logged stakeholder feature requests in internal tickets.

**Google (Cognizant)** Oct 2024 – Apr 2025
***Data Analyst*** *Mountain View, CA*

- Translated business questions into prototype-testing **product metrics** for Android XR studies, surfacing **participant retention drivers** to Product Managers via **Looker** dashboards built on **BigQuery SQL**.
- Built structured **SQL** eligibility criteria and **segmentation** logic supporting 600+ Augmented Reality data collection studies.
- **Automated** retroactive **data-entry validation** and test scheduling using **Python, JavaScript,** and **Google Cloud Platform integrations**, streamlining downstream **ML** model delivery by a projected 30%.

## Projects

**Spotify 'Smart Queue' Simulated A/B Experiment** | Python, SQL, BigQuery, Mixpanel, Next.js Oct 2026

- Designed an E2E evaluation framework for a simulated **feature launch**, defining **success metrics, guardrails**, and decision rules in advance. Ran **power analysis** and SRM checks, then evaluated a seeded simulation of 14,420 users (398K rows) using Welch, non-inferiority, novelty-decay checks, and bootstrap CACE methods.
- Built a reproducible workflow from Python hypothesis testing through BigQuery SQL and ingestion API to a **self-serve Mixpanel dashboard**; documented the **tracking plan**, repository, and resulting launch recommendation.

**Amazon GPU ETL Pipeline** | Airflow, Docker, Python, PostgreSQL Feb 2025

- Built a scheduled **ETL** (**Airflow** DAG in **Docker**) that scrapes and transforms GPU listings into Postgres for automated ingestion.

**Partner Engineering - EDA & Supervised Model** | SQL, R, sklearn, pandas Jan 2024 – Jul 2024

- Deployed a **Balanced Random Forest** classifier (winning 3rd place, UCI Data Science Expo) after cleaning and analyzing 40M+ real estate records, contributing to an **Machine Learing** recommendation system to automate a report-writing tool.

## Education & Certifications

**University of California, Irvine** Sep 2024
***B.S. Data Science*** *Donald Bren School of Information and Computer Sciences*

**Google Analytics 4 (GA4) Certification** *Google Skillshop*
