Adam Ho

408-203-9917 | adamho129@gmail.com | Portfolio | LinkedIn | GitHub

Summary

2+ YOE in Software Engineering and Product Analytics, across SaaS startup quality engineering and consumer tech research (Apple, Google). Skilled in **UI and API test automation**, **building CI/CD, data pipelines**, and **experiment design and analysis**, turning results into clear recommendations for engineering and product stakeholders.

Skills

Technical: TypeScript/JavaScript • Python (pandas, NumPy, SciPy, statsmodels, scikit-learn, TensorFlow) • React/Next.js • Node.js • REST API • SQL • Docker • GraphQL • Postman • Git • BigQuery • Databricks • Airflow • R • Looker • Tableau • Power BI
Product Analytics: A/B Testing & Experiment Design • Power Analysis • Funnel & Retention Analysis • KPI & Metric Definition • Event Tracking & Implementation • Root-Cause Analysis • Dashboards & Self-Serve Reporting • Mixpanel • GA4 • PostHog

Experience

QA Wolf Oct 2025 – Oct 2026
Software QA Engineer *Remote*

- **Led** QA automation for an **AI analytics startup**: enabled **product launches** with automated **regression testing** of multiple **new features**, defined **success criteria**, served as main **stakeholder liaison**, and resolved greenlight and deploy issues.
- Automated **UI and RESTful/GraphQL API tests via Playwright/TypeScript**, scaling team coverage to **2,500+ tests per deploy**. Drove **requirements gathering**, translating criteria into test plans for product and engineering stakeholders.
- Built **CI/CD pipelines** and tuned **concurrency** to cut flake (false-positive) rates by **80%** and give **deploy confidence** in major product updates. Scoped **test coverage** and optimization priorities by impact across **∼12 concurrent enterprise SaaS clients**.
- **Debugged and root-caused 100s of test failures daily** from CI/CD runs and user-reported tickets using **network and console logs**, working a **prioritized queue under strict SLAs**; documented repro steps and Loom recordings in **Jira** and **Linear**, cross-referencing clients' internal tickets to catch duplicate and misdiagnosed issues.
- Developed **custom MCP integrations** (**Node.js/TypeScript**) connecting our AI-powered QA platform's live Playwright runners to **agentic Claude Code workflows** in VS Code, accelerating triage, debugging, and test authoring.

Apple (Akkodis) Apr 2025 – Oct 2025
User Research Analyst *Sunnyvale, CA*

- Designed and analyzed **A/B experiments** comparing UI and hardware variants across a ∼900-participant VR product study, using **NumPy/pandas** for **non-parametric hypothesis testing** and **SQL** to deliver **data-driven recommendations** to product.
- Defined and reported **KPIs** across 8 concurrent user studies, consolidating metrics from individual trackers into an **automated Tableau dashboard** that became the source of truth for weekly cross-functional business reviews and **prioritization decisions**.
- Designed **experiment protocols**, participant **segmentation and eligibility logic**, and subjective measurement scales, aligning research design with **UX Research** and Product goals; translated stakeholder feature requests into tracked **requirements**.

Google (Cognizant) Oct 2024 – Apr 2025
Data Analyst *Mountain View, CA*

- Translated business questions into **product metrics** for Android XR prototype studies, surfacing **participant retention drivers** to Product Managers via **Looker** dashboards on **BigQuery SQL** that informed prototype decisions.
- Built reusable **SQL segmentation** and eligibility logic on a database of 600+ product study participants.
- **Automated** data-entry **validation** (including retroactive checks) and test scheduling with **Python**, **JavaScript**, and **Google Cloud Platform**, improving data quality and projected to speed downstream **ML** model delivery by 30%.

Projects

Spotify 'Smart Queue' Simulated A/B Experiment | Python, SQL, BigQuery, Mixpanel, Next.js, Databricks Oct 2026

- Designed an end-to-end **A/B experiment** framework for a simulated **feature launch**, pre-registering **OEC, guardrail metrics**, and decision rules. Ran **power analysis** and **SRM checks**, then analyzed a 14,420-user simulation (398K rows) with **Welch**, non-inferiority, novelty-decay, and **bootstrap CACE** methods to deliver a **ship/no-ship recommendation**.
- Defined **tracking schema** (events, properties) for a mockup in Next.js, then built a pipeline from ingestion through **BigQuery SQL** (ported to **Databricks**) to a **self-serve Mixpanel dashboard** covering **funnel**, adoption, and cannibalization metrics.

Amazon GPU ETL Pipeline | Airflow, Docker, Python, PostgreSQL Feb 2025

- Built a scheduled **ETL** (**Airflow** DAG in **Docker**) that scrapes and transforms GPU listings into Postgres for automated ingestion.

Partner Engineering – EDA & Supervised Model | SQL, R, sklearn, pandas Jan 2024 – Jul 2024

- Deployed a **Balanced Random Forest** classifier (winning 3rd place, UCI Data Science Expo) after cleaning and analyzing 40M+ real estate records, contributing to a **Machine Learning** recommendation system to automate a report-writing tool.

Education & Certifications

University of California, Irvine Sep 2024
B.S. Data Science *Donald Bren School of Information and Computer Sciences*

Google Analytics 4 (GA4) Certification *Google Skillshop*
